

Edmentum offers a complete GED® preparation solution aligned to the new 2014 Test.

## Diagnostic Solution for 2014 GED® Test Programs

### At the forefront of change

The GED test went through major changes, and an all-new test was introduced in January 2014. The new test aligns to more rigorous standards, includes technology-enhanced item types, and requires a computer-based delivery platform and provides an option for Spanish speaking learners. These changes will help more learners truly become college and career ready. Having these skills will help open the doors to better paying jobs, new careers, college classrooms, and a brighter future for students. Ensure that your learners are prepared for the new test with the Edmentum's GED® Test Pack, available in English and Spanish.

### Easily identify your learners' GED test skill gaps

Reduce the time it takes to prepare your learners for the new 2014 GED test by identifying any skill gaps they may have before you start your instruction, allowing you to target their individual needs.

Edmentum's GED Test Pack provide rigorous assessments that measure where your learners are against the GED exam objectives and automatically creates a prescription of modularized, age-appropriate content based on their needs.

Edmentum™  
**TEST PACKS Rx**

- Assess your learners against the GED® test objectives with fixed benchmark tests available in English and Spanish.
- Easily administer tests to automate fluid individualized prescriptions for every learner.
- Promote higher-order thinking and inquiry with technology-enhanced item types that provide broader coverage of depth of knowledge (DOK) levels.
- Customize your assessments at the reporting category level to direct smaller areas of focus.

**Multiple Choice**  
 Students choose the single best answer.

**Matched Pairs**  
 Students move answers from one column to the next and create matching pairs.

**Constructed Response**  
 Students construct a response using evidence from the question or reading passage to support their view.

**Hot Text**  
 Text choices are identified for the student within an item, and the student selects the correct text answer or answers with the cursor.

**Multiple Response**  
 Students can select more than one correct answer in a multiple-choice format.

**Hot Spot**  
 Using the cursor, the student identifies a location in an image that represents the correct answer.

**Cloze**  
 Students select a response from a drop-down box in an equation or sentence.

**Fill in the Blank**  
 Students enter an alphanumeric response in an open box in an item. An item may have more than one open box.

**Sequence**  
 Students click on an image and move it to the correct location on the screen, in sequence, to create the correct overall answer.

**Graphical Gap Match**  
 Using the cursor, students drag one image to another to answer the question.
