

New Student Information System for EdOptions Academy

Upgraded Student Information System
Perform your daily actions more easily than ever before!

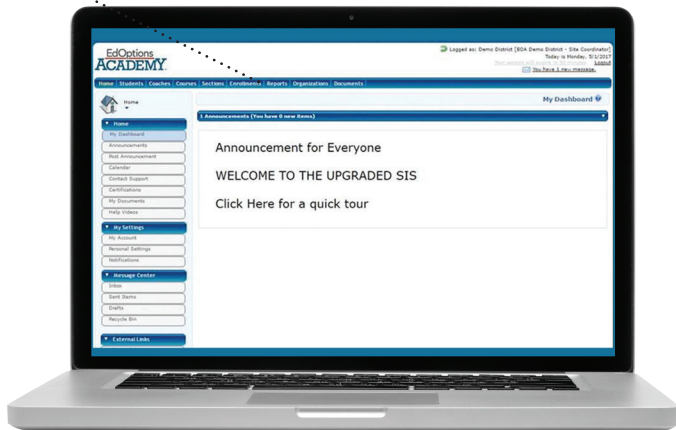

EdOptions Academy is upgrading to a new Student Information System this summer. This new system will allow you to:

- Roster students more quickly
- Bulk enroll students into multiple classes at once
- View course descriptions within the SIS
- Easily track communication for your students

With this upgrade, all of your students and school users will be automatically moved over and you will still have access to the same great courses and teachers!

Below is a sneak peek at what the upgraded interface will look like.

- Navigation in the upgraded student information system will be similar to the current system - section tabs across the top and a menu on the left side of each page.

- In the new student information system, you will be able to view course descriptions as you are creating enrollment requests for a student or multiple students.
