HOW IT WORKS

1 Ms. Serrano delivers her normal, high quality instruction to her Algebra I classes.

2 Ms. Serrano regularly evaluates student readiness throughout the year. She has a few options, such as:

Weekly	Unit by Unit	Pre-Exam
Once a week, Ms. Serrano checks for understanding with a short online assessment. This is the exit ticket for that day.	Before each unit test, Ms. Serrano's students take an assessment to identify which topics they need to review.	Four weeks before the exam, Ms. Serrano begins intensive review. Online assessments reveal student strengths and weaknesses, so she knows where to focus her review.

3 Ms. Serrano checks the assessment results on her dashboard, then uses class time to address common learning gaps with a combination of whole and small group instruction and personalized learning.

OUTCOMES SPEAK FOR THEMSELVES

THE RESULT

The Teacher

Ms. Serrano tracks and responds to student performance quickly, so she can spend more time teaching and less time tabulating.

The Department Chair

Department chairs and administrators can see how students are doing across all classrooms, so they can coordinate real-time interventions throughout the year.

This made it so easy to see exactly how my students are doing. Plus, it made independent work time even more productive.

Teacher

Having real-time insight into how every classroom is doing makes it much easier to coordinate our efforts to raise our students' achievement.
